Back matter

Acknowledgments

Not applicable.

Funding

This work was supported by the National Natural Science Foundation of China (Grant No. 41974209).

Conflict of interest

The author declares that there is no known competing financial interest or personal relationship that could have appeared to influence the work reported in this paper.

Author contributions

Lu Bin is the sole author and was responsible for conceptualization, methodology, software development, validation, formal analysis, investigation, visualization, writing the original draft, and reviewing and editing the manuscript.

Ethics approval and consent to participate

Not applicable.

Consent for publication

Not applicable.

Availability of data

The code and synthetic results are available at https://github.com/Lubin2000/coal-seam-love-wave-reliability. The version-family concept DOI is https://doi.org/10.5281/zenodo.24054133. Original software is licensed under MIT and original data, figures and documentation under CC BY 4.0. No field data or third-party article PDFs are redistributed.

Declaration of Generative AI and AI-assisted Technologies

During preparation of this manuscript, the author used OpenAI Codex for coding support, literature organization, numerical experiment assistance and language editing. The tool did not generate field observations. The author reviewed and verified all code, numerical outputs, references and manuscript content and accepts full responsibility for the accuracy, originality and integrity of the final manuscript.

Further disclosure

No conference presentation or preprint of this work was used as the submission basis. The software is publicly archived under the DOI listed above.
